

TILT & TURN WINDOWS & DOORS

Benefits of Tilt & Turn

Acoustical

- Multi-Chamber Profile design with interior packets allows better sound absorption
- Compression Seal Technology
- Fusion-Welded Corners for better air and sound insulation

Structural

- Designed to meet hurricane resistance standards.
- Heavy gauge steel core
- Multi-point locking security hardware

Thermal

- Operable and fixed windows with 0.20 U-value or better
- Warm surface similar to wood
- No condensation

The innovative Tilt & Turn design allows our windows and doors to offer unmatched versatility

Tilt & Turn windows blend the best features of casement, picture, and tilting designs to create an elegant and functionally simple window. The top tilt position allows ventilation and offers total rain protection. With a simple turn of the handle, the entire window opens just like a traditional hinged door for maximum ventilation, egress opening and ease of cleaning. When in the closed position the Tilt & Turn has the classic, elegant appearance of a picture window.

Our unique Tilt & Turn Patio Door gives new meaning to the words functionality and flexibility. In the upright position, the Tilt & Turn functions as a traditional in-swing patio door providing easy entrance and exit. In the tilt position, the entire door gently tilts inward to provide air circulation and cross ventilation without compromising security. The Tilt & Turn Patio Door is the perfect blend of the best features of a window and a door into one creative and distinctive entrance system for your home.

Superior insulation, dual weather seals and a multi-chambered design reduce heat loss and noise infiltration so your family can enjoy warmer, more comfortable living. The fusion welded frame and corners ensure strength, stability and long-lasting durability, while the multi-point locking system around the entire frame offers total security whether your window or door is closed or tilted open.

Features & Options

Hardware

- Multi-Point Security Locking System
